MINIMUM SAMPLE SUBMISSION QUANTITIES FOR RINSE TESTING

The sample quantities requested for submission are designed to allow for 1) protection of the sample from contamination in transit; 2) testing of the appropriate area of the sample pieces; 3) retention of remaining sample and retesting in the event that a question should arise from the test results. All samples are to be collected in a manner that minimizes that potential for contamination from an external agent.

CONTAINERS CAPABLE OF HOLDING A LIQUID VOLUME OF >100 mL

A minimum of 15 to 20 items in a sleeve of finished packaging should be submitted.

Other containers, depending upon their shape and size, will be addressed individually.
